
Job Description for System Engineer

3 Year Training Program (Entry Level)

Location: Visakhapatnam

Number of openings: 3 to 5

We offer an entry level intensive 3 year training program designed to accelerate technical network fundamentals and career progression. This is a demanding program aimed for those dedicated to a career in network infrastructure, systems engineering, and network DevOps.

Self study and dedication outside regular business hours are required.

Ideally suited for those with degrees in Computer Science, Engineering, Information Technology, Computer Information Systems, Computer Engineering, Management Information Systems or similar field.

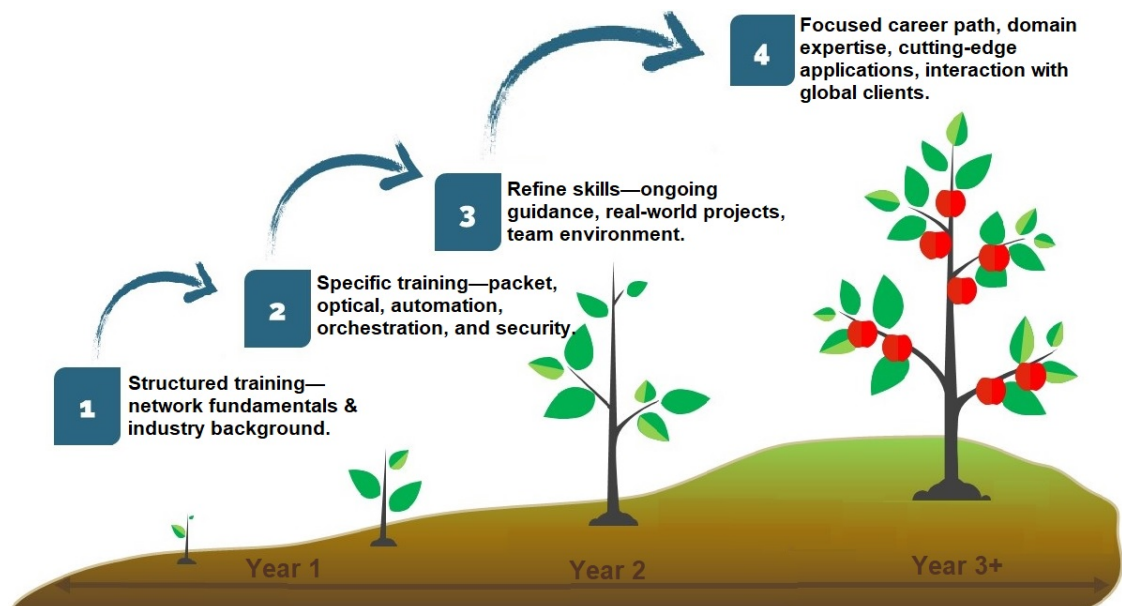

We cultivate a diverse, inclusive team who want to re-imagine and collaborate to improve next-generation networks.

What we look for in our training candidates.

- 1.) Communication skills
- 2.) Ability to collaborate and coach others
- 3.) Capable of multi-tasking
- 4.) Self motivated
- 5.) Eager to constantly learn and evolve

Our general training framework.

- 0-6 months: fundamental network training and communication skills
- 6-12 months: team specific project collaboration (IP, Optical, Automation, Orchestration, or Project Management)
- 12-24 months: project designs, optimizations, documentation, feasibility studies, network emulations, multi-vendor testing, lab validation testing
- 24-36 months: customer interaction, project management, system integrations, troubleshooting, prescriptive models, communicate to technical and non-technical audience, constantly evolving to understand the challenges and solutions

Our training program provides employees substantial opportunity to develop unique skills and jump-start their careers in a manner not possible at larger firms.
